Figure 5 is a sectional view taken along line **[[4-4]] 5-5**, showing only the related parts in the insertion configuration.

Figure 3 has all of the elements of Figure 2 but has an added internal securing band 12c. The band 12c can be deformed for installation in the position shown, and expanded into final position. The related details are shown by Figures [[4 and 5]] 5 and 6.

Figure 4 is identical to Figure 3 with grooves on the inner surface of the metal sleeve 2 in the area 2a contacted by the elastomer sleeve 12. [[inner]] Inner band 12c exerts radially outward force on the sleeve 12 to seal and secure assembly with or without bonding in the area 12c.
